

Unit 7 – Assignment 1

What works and what doesn't?

The program works fully—reads the file, counts words, filters correctly, and times both Map types.

2. How did you test it?

I tested with a small file first, then used the large A text-book of veterinary anatomy.txt for final runs and timing.

3. Timing data and HashMap vs. TreeMap?

- TreeMap: 337.68 ms
- HashMap: 155.22 ms

HashMap is faster due to $O(1)$ access. TreeMap is slower but keeps keys sorted.

4. What did you learn?

I learned how Map types affect performance and how to process large text efficiently.

5. What did you like?

I liked testing real data and comparing performance of data structures.

6. What was confusing?

The punctuation rules could have been clearer at the start.

7. If you had more time?

I'd add user input options and log results to a file.
